## EXPERIENCE

### TwitterClone

TwitterClone is a clone of Twitter using Firebase Cloud Database login and messaging functionality.

Repo: <https://github.com/patterson-dtaylor/TwitterClone>

### CheckIt: To-Do iOS Application

This to-do application keeps track of the users to-do list. The user data is maintained with Realm Database, and UI elements are handled with Cocoapods SwipCellKit and ChameleonFramework.

Repo: <https://github.com/patterson-dtaylor/CheckIt>

### Twittermenti

Twittermenti is an machine learning iOS application that allows the user to search a username or hashtag which renders an emoji by looking at the sentiment of the first 100 tweets associated with the search.

Repo: <https://github.com/patterson-dtaylor/twittermenti>
